(54) POWER SUPPLY DEVICE AND POWER SUPPLY SYSTEM USING THE POWER SUPPLY DEVICE

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a power supply device capable of preventing the generation of useless power consumption and a power supply system using the power supply device.

SOLUTION: The power supply system is provided with plural power supply devices 10, 20, 30 each of which includes a power

A. 134

supply part P (P1, P2, P3) for outputting a power supply current connection terminals T1, T2 connected to a power supply cable C1 for supplying the power supply current from the power supply part P and a power supply control means S for comparing the voltage value detected through the terminals T1, T2 with a reference voltage value set up more than the output voltage value of the power supply part P and controlling the power supply part P so as to turn off the output of the power supply current when the detected voltage is higher than the reference voltage value and turn on the output of the power supply current when the detected voltage is lower than the reference voltage value based on the compared result and these power supply devices 10, 20, 30 are mutually connected through the power supply cables C1.
